

Wendy DeWeirdt

Wendy DeWeirdt is the Senior Regional Manager for DreamBox Learning, the leading highly adaptive K-8 math program installed in hundreds of schools throughout Washington and thousands of schools across USA and Canada. Wendy has her M.S. Ed in Reading and Learning Disabilities and taught in a variety of settings before focusing on integrating technology into classrooms, which she has done for over 15 years. Having worked at IBM, Compass Learning and now DreamBox, Wendy's passion is helping teachers to benefit from the ability of programs like DreamBox to assist with things that are most difficult in the classroom, like differentiating instruction and providing data that is actionable and assists with making more informed instructional decisions. At the same time, Wendy's goal is to help all students succeed in math, regardless of zip code, while developing confidence in their math ability and hopefully having fun at the same time.
